Moreover, there are more than 90 independent dealers moving forklift materials and materials handling equipment. This network helps Doosan Infracore America to aggressively compete in this competitive marketplace. The forklift product line impressively includes 63 distinctive versions consisting of 82 various battery and engine configurations of Electric-powered and Internal Combustion lift trucks. Capacities of these numerous vehicle models vary from 3,000 to 33,000 lbs. All vehicles are designed in an ISO 9001 certified facility.

Doosan Infracore America is the fastest expanding lift truck business in the North American marketplace, due to their reliability in maintaining a high degree of client service quality and optimum product performance to all Doosan Infracore Lift Truck users. The U.S. lift Truck division situated in Cleveland has a expert team knowledgeable in Product Sales, Purchasing, Advertising, Logistical and Technical Support.

Korea's initial home-based forklift market was an open-import enterprise. In the 1960's, Korea Machinery Co. Ltd. started to import assembled forklifts as part of a nationwide machinery expansion venture. Early sales of this manufacturing equipment focused on large business communities, the armed services and on state-run companies. This eventually led to a unification with Daewoo Heavy Industries Ltd. In 1976, the Forklift Division begun trade operations throughout Korea to overhaul and sell this heavy equipment. By 1978, a forklift manufacturing plant was successfully completed. Continuous technical training became the new focus for enhancing quality and product development.

Home-based lift truck trade for Daewoo started in 1967 and grew to an astounding 90% market share in Korea. By the 1980's, Daewoo's progressive technological improvements combined with sales success placed them in a position of considerable growth of their lift truck business.

In 1981, Caterpillar Industrial Inc. of the United States, proposed a joint venture project to respond to competitive pressures in the US materials handling market. This plan drastically expanded Daewoo's forklift sales. Construction was finished in 1984 to facilitate a modern plant which helped establish the business for the fabrication of high end added-value products suited for export. In 1993, the corporation had a global sales system and started exporting models they had established through in-house technology, as an sovereign brand. Certifications were then acquired from CE of Europe, UL of the United States and ISO 14001 and ISO 9001, securing expansion opportunities into overseas markets.
